

HeBoSint[®] Typical Areas of Application^{*)}

HeBoSint [®] Grade	D	P	C	O	A
components for high-temperature electric furnaces					
insulators for plasma-jet furnaces, ion engines, and PVD-ARC equipment					
mechanical components, pipes, and nozzles for liquid metal handling					
protective tubes and insulating sleeves for thermocouples					
molten metal and gas sensor components					
crucibles for metal evaporation					
components for metal and glass melts					
spanker plates used in the glass production					
spanker plates used in the glass production					
casting components for precious metals, dental, and other special alloys					

*) For your specific application please ask for more detailed information.
